## Basic Mixer Cartridge Seal Ranges

**This brochure covers the range of AESSEAL® basic Mixer cartridge seals designed for Mixers, Agitators and Reactors. This range has been designed to accept and accommodate the prevalent conditions in mixing and associated applications.**

Mixer, Agitator and Reactor applications vary from simple blending or solid dissolution to the more exacting standards of solids suspension, gas dispersion or containing/promoting chemical reactions.

The basic mixer range covers unit seals, cartridge seals, non-metallic seals and seals with and without bearings.

Mixers are used in the Food, Beverage and Pharmaceutical industries, yet generally the Chemical and Process industries have the most varied and difficult mixer problems and, therefore, require precise sealing technology. The AESSEAL® mixer seal range ensures that the most demanding applications can be accommodated.

3D Model

### Advanced Mixer Cartridge Seal Range

AESSEAL® also produce a Mixmaster brochure for the top end of the range which have high load carrying capabilities. We also produce a Mixer, Agitator & Reactor seal range booklet which incorporates more specialized seals for this industry as well as in depth case histories of seals.

For more information these brochures can be downloaded from the AESSEAL® website at [www.aesseal.com](http://www.aesseal.com).

### Development Background

The AESSEAL® Mixmaster range has been developed only after extensive performance and field evaluation tests, conducted over many years.

The range has been created using the latest Computer Aided Design and Manufacture programmes including Finite Element Analysis.

These programmes help to predict how the seals can be produced and also how they will perform under various application conditions. This technology has vastly reduced the lead time for product development and thus reduced the overall cost of the seal range.

Massive investment in Computer Aided Design, Manufacture and PDM (Product Data Management) helps to ensure that the seal is fit for the purpose.

Computer simulation is very effective for evaluating seal performance, however, all AESSEAL® mechanical seals still have to undergo physical testing in various hazardous conditions.

Investment in inspection facilities which include the latest Co-ordinate Measuring Machines (CMM) allow computer controlled inspection for all AESSEAL® designs. The result is an industry leading range of mechanical seals.

# ESM™ - External Seal for Mixers

The AESSEAL® ESM™ is a unit external seal designed for ease of installation as the faces are clipped together and despatched assembled in a leak free state.

The standard ESM™ seal is driven through socket set screw clamping, with a Carbon/Ceramic seal face combination and a gland which is designed to suit the customer's equipment.

All wetted parts are non-metallic, therefore, the seal is ideally suited for corrosive vapour applications commonly found in Top Entry Mixers.

- **Balanced seal face design**
- **Modular design**
- **Unit designed for ease of installation**
- **ESM™, ESCM™, ESTM™, ESCTM™ non-metallic wetted design**
- **NCM™ non-chemical design**
- **Springs out of product**
- **Seal flange manufactured to suit equipment**

**ESM™**  
External Seal for Mixers

**Sizes Available** 1.000" to 2.500"  
25mm to 63mm

Designed for ease of installation the ESM™ has non-metallic wetted parts and is therefore ideally suited for corrosive vapour applications commonly found in Top Entry Mixers.

**NCM™**  
Non-Chemical for Mixers

**Sizes Available** 1.000" to 5.000"  
24mm to 125mm

The NCM™ is an external seal unit designed for ease of installation, as the faces are clipped together and despatched assembled in a leak free state. Some wetted parts are metallic, therefore the seal is unsuited for some severe corrosive applications.

**ESTM™**  
External Seal Teflon for Mixers

**Sizes Available** 1.000" to 2.500"  
25mm to 63mm

A sister variant on the ESM™, the ESTM™ replaces the Carbon/Ceramic face combination with Teflon (P.T.F.E.)/Ceramic, for applications where Carbon is not compatible with the process fluid.

**ESCM™**  
External Seal Colleted for Mixers

**Sizes Available** 1.000" to 2.500"  
25mm to 63mm

The ESCM™ employs the same seal principles as the ESM™ except for the clamping device. The ESCM™ utilises a collet clamp ring making the unit particularly applicable to hard and soft shafts.

**Buffer Canister™ Option**

Buffer Canister™ option available on ESM™ - NCM™ - ESTM™ - ESCM™ - ESCTM™

The buffer canister option is available on both the ESM™ and NCM™ range of unit seals. The simple design can be of an open or closed top construction and slides over the external seal. An O-ring is then placed in the clip groove to prevent leakage. The fluid in the canister "bathes" the seal faces and therefore is applicable for the dry running applications which are commonly found in top entry mixers.

**ESCTM™ - External Seal Colleted Teflon for Mixers**

**Sizes Available** 1.000" to 2.500"  
25mm to 63mm

A hybrid unit seal of the previous options. The ESCTM™ offers a Teflon/Ceramic face combination, collet clamping and gland designed to suit the customer's equipment. All wetted parts are non-metallic.

ESM™ - ESCM™ - ESTM™ - ESCTM™	
Seal Size	T.I.R. (K max)

# Mixmaster I™ - CSWIB™

The AESSEAL® Mixmaster I™ is a single cartridge mechanical seal, with balanced seal faces and an integral (steady) bearing.

The Mixmaster I™ can be ordered in types B, C & D in a variety of gland combinations concerning flush, quench, drain and grease connections and also different face combinations. The gland plate is machined to meet the customer's requirements with respect to outside diameter, bolt circle diameter and stuffing box location.

## Type B

Quench, Drain & Grease Connections

## Type C

Type B Design with Flush

## Type D

Exotic Alloy Option with Quench, Drain & Grease Connections

Minimum bolt circle based on bolt size shown.

# Mixmaster II™ - DSWIB™

The AESSEAL® Mixmaster II™ is a double cartridge seal with integral bearing design with concentric faces so that the seals overall length is reduced.

The CSWIB™ & DSWIB™ are offered with the following features:

- The integral bearing (pre-installed) is designed as a steady bearing and may not take the full radial load applied to a mixer
- Quench drain & grease connections as standard
- Available with flush connection (type 'C' only)
- No shaft fretting
- Balanced seal faces
- Non-clogging rotaries
- Most suitable for low shaft speeds
- Supplied with high tensile, corrosion resistant socket set screws

**DSWIB™ - (inches)**

**Dependent upon application**

The Mixmaster II™ can be ordered in types B, C & D.

Like the Mixmaster I™, the Mixmaster II™ seal is manufactured from a fully machined gland, to the customer's specification.

**Note:** All face combinations up to 3.250" are standard AESSEAL® face materials. Contact the AESSEAL® technical department for hard face options above this size.

When ordering a CSWIB™ or DSWIB™ seal, please state accurately the following details: **STUFFING BOX BORE - QUANTITY, SIZE AND SPACING OF BOLTS and BOLT CIRCLE DIAMETER.** Please read and quote document Ref. AW 0810 and complete a seal application form with all enquiries. This can be obtained from [marketing@aes seal.com](mailto:marketing@aes seal.com).

## Environmental Control Systems for double seals

In addition to a vast range of mechanical seals, AESSEAL® has a specialized systems division, dedicated to the design and manufacture of a comprehensive range of seal support packages for double mechanical seals. These support systems range from Thermosyphon systems, SWFF-TF™, Flow True™ and AES-15™ to the fully featured forced circulation system FDU™ for use on oil and water applications.

**SWFF-TF™**

**Flow True™**

**AES-15™**

**FDU™**

The systems above are compatible with a wide selection of barrier and buffer fluid media. They are supplied pre-assembled with all necessary components and fittings. On site inventory costs are reduced by modular system construction.

# CDM™ - Cartridge Double for Mixers

The AESSEAL® CDM™ is available in a wide range of seal face, elastomer and alloy combinations, to suit individual applications.
